peerguess
COLLABORATIVE CRYPTOCURRENCY TICKER

About Peerguess

Peerguess is a free, one-stop-shop cryptocurrency price ticker application where the users will also guess future prices to earn gems, learn about community tendencies and have access to the sophisticated data to improve your intuition. With collaboration at the heart of the system, peerguess will provide "market sentiment" data to both its users and business partners.

Problem

Tracking the change of cryptocurrencies are time-consuming, as well as digesting all the news and other factors affecting them.

We also should always keep in mind that there are slim to none regulations in place; meaning that any cryptocurrency, big or small, can rise or fall with high percentages. Therefore, applying the real-world market analytics to cryptocurrencies doesn't fit it most of the times, and ends up with failure.

To be successful on cryptocurrency journey, one should know analytics, follow the news, follow social media but moreover one needs to "feel" the market sentiment and tendencies.

Solution

Peerguess designed as a community-based eco-system where every peerguess users' "feeling" will count. To achieve this goal, and to encourage this behavior of opinion sharing, peerguess introduced "gems" - and will soon introduce "stars" - into something that every crypto lover is using on a daily basis, a ticker app.

No matter what type of experience the peerguess users have, every "guess" they make is being aggregated and offered as Cumulative Guess Analytics. This aggregated data will also be the core part of our machine learning engine.

The Market

The estimation of people trading cryptocurrencies is over 25 million as of the end of 2017. Total market capitalization of the currencies is over $500B now, and it keeps rising as more and more crypto traders/enthusiasts come in.

We aim to be one the de facto tools of this fast-growing market for every newcomer, as well as experienced traders.

Platform Economy

Peerguess platform users can purchase any number of gems from the In-App Purchases system of AppStore, and soon Google Play.

Also, users will be able to convert Peerguess (GUESS) Tokens into gems and vice versa over the web interface. The platform will make sure that using GUESS Token conversion, always stays below the AppStore and Google Play rates. GUESS Tokens holders will also be incentivized and rewarded. This usage of tokens will generate demand and high volume.

GUESS Token Information and Structure

GUESS is an ERC20 compliant Ethereum token with a maximum supply of 200,000,000. Tokens distributed to ICO participants and bounty hunters are 6,000,000 and 2,000,000 respectively.

GUESS tokens are available on four different exchanges: Yobit, Stocks.Exchange, IDEX, Macro Exchange. Currently rated $0.047 per token, 13.8M tokens are in circulation with a total market cap value of $650k+.

Product and Roadmap

Peerguess v1 is available on AppStore. Android and Web version will be ready within 2018 Q2.

Peerguess v2 development items are fixed, and all new features will come within 2018 Q2 and Q3, including but not limited to data coming from more exchanges, language support, advanced sorting and search, achievement and attendance systems, news section and hall of fame section.

Peerguess will also provide widgets to his smartphone users to penetrate more of the screen view in upcoming quarters.

The Vision

From individuals to an ecosystem, the power of the peerguess platform comes from creating a whole that is larger than the sum of its parts.

While users play with Gems and make guesses, these guesses will generate a community thought, and as an output, you will be able to see what the community thinks about Bitcoin's (or any other altcoin) value in the next 24 hours.

We believe that, in short time, all cryptocurrency ticker and portfolio applications will be replaced by peerguess as it provides not just the common features all cryptocurrency followers have been looking for, but also a game to play even if you don't currently own any cryptocurrency.
